1. INTRODUCTION

This Best Execution Policy ("Policy") provides summarised information on execution processes and procedures of **Magna Capital Limited** ("**Magna**" or the "**Firm**") in accordance with Markets in Financial Instruments Directive 2014/65/EU ("MiFID II"), which requires Magna to take all sufficient steps to obtain the best possible result when the Firm is either executing transactions or transmitting orders to other entities for execution on behalf of the Firm's clients.

Magna reviews this Policy at least annually and updates whenever any material change in its execution processes is taking place. Material change includes changes to top five venues and investment firms, changes to instruments in scope of this Policy and changes to the importance of Execution Factors.

Magna services clients across multiple asset classes with numerous financial instruments as defined by MiFID II. Financial instruments do not include spot FX; however, this Policy includes spot FX transactions that are ancillary to financial instruments. Appendix 1 provides detailed information in respect of each financial instrument traded by Magna

This policy should be read in conjunction with the Client Agreement to understand Magna' execution services. If there is anything you do not understand, or would like clarification of, please contact our Client Services Team.

2. REGULATORY CONTEXT

This Policy is prepared and reviewed in accordance with regulatory requirements set out in MiFID II. The main requirements are set forth in level 1 Article 27 of MiFID II. In addition, level 2 Articles 64-66 of the Commission Delegated Regulation 2017/565 ("Delegated Regulation") provide detailed provisions. Aside from these specific best execution rules, Magna always acts honestly, fairly, and professionally in accordance with the best interest of its clients.

3. POLICY STATEMENT

Magna acts in accordance with the best interests of its Clients and take all reasonable steps to obtain the best possible result, considering all the execution factors.

4. SCOPE

Magna must, when providing the service of reception and transmission of orders, comply with the obligation to act in accordance with the best interests of its clients when placing orders for execution or executing orders directly with affiliated entities or third parties that arise from decisions by Magna to deal in financial instruments on behalf of its clients. As of the date of this Policy, all Magna's clients are categorized as Professional Clients in accordance with MiFID II client category rules and this Policy addresses Magna obligations in respect to this category of clients.

Should Magna act as an Introducing Broker, this Policy does not apply. Instead, the order execution policy of the delegated counterparty firm applies.

4.1. CLIENT SPECIFIC INSRUCTIONS

When Magna receives client specific instructions which set restrictions on trading, Magna will carry out transactions in accordance with these instructions while considering all other relevant factors which are outside client specific instructions. In case of client specific counterparty restrictions, best execution as defined in this Policy may only be delivered within those constraints. Magna may not induce clients to set restrictions on trading.

5. ORDER PROCESS

The following section describes the overall order process from investment decision to settlement of transaction(s) relevant to best execution. The order process consists of the following four steps:

- Order handling
- Transmission or execution of orders
- Types of orders
- Settlement

5.1. ORDER HANDLING

When Magna carries out client orders, it must ensure that orders are:

- Transmitted or executed promptly;
- Accurately recorded and allocated; and
- Executed sequentially unless the characteristics of the order or prevailing market conditions make this impracticable, or the interests of the client require otherwise.

Magna order handling may involve the aggregation of one or more client orders. This is allowed only if the aggregation works to the overall advantage of the clients whose orders are to be aggregated. However, aggregation may be disadvantageous in terms of a single order. Magna allocates the related trades according to internal allocation procedures. These procedures ensure that orders are allocated fairly across portfolios and preference is not given to one client over another.

5.2. TRANSMISSION OR EXECUTION OF ORDERS

When acting on behalf of clients, and as described in Magna's Client Agreement, the Firm may transmit the order to another investment firm, execute the order directly on a venue or execute the order bilaterally with an approved counterparty (OTC).

Order Transmission: When Magna sends an order to a broker for execution, the order is transmitted by Magna. In case of transmitted orders, the receiving broker executes the order in accordance with its own Execution Policy. Orders may only be transmitted to brokers approved by Magna

Order Recoding: Order details are managed and recorded according to the Firm's Data Protection Policy.

Order Execution: Magna executes transactions directly with an approved counterparty or on a trading venue, either as participant or through Direct Electronic Access (DEA) via a broker's membership. Execution may only take place on approved venues or with brokers approved by Magna. Magna currently executes orders on the following types of venues as defined by MiFID II:

- Multilateral Trading Facilities (MTF);
- Systematic Internalisers (SI);
- Third party investment firms and/or affiliates acting as a Market Maker or other liquidity providers; and
- Non-EU entities performing similar functions.

Internal crossings: Magna may use internal crossings when the result works to the overall advantage for all involved clients relative to what would be achievable by outright trading in the market. Magna uses internal crossings to reduce total cost of trading for clients by avoiding factors such as market impact, information leakage and spread costs.

Depending on the instrument type, Magna may use one of the following benchmarks for determining the crossing price: current mid-market price, volume weighted average price, market-on-close price, or NAV time- strike. Magna will in most instances use the mid-market price as the benchmark to ensure equal treatment of clients. Internal crossings between Magna clients are carried out externally through approved brokers or venues.

5.3. TYPE OF ORDERS

Given the risks that arise when trading in volatile markets, the client may want to consider using different types of orders to limit risk and manage investment strategies. (It should be noted that the following descriptions of order types may apply only to some and not all types of investment instruments)

Buy/Sell Stop is a type of pending order that the client can place to buy or sell order on an investment instrument at a price worse than the price at the time of placing the order. Orders need to be on a specific distance from the current market price at the time of placing the order(s).

Buy/Sell Limit is a type of pending order that the client can place to buy or sell order on an investment instrument at a price better than the price at the time of placing the order. Orders need to be on a specific distance from the current market price at the time of placing the order(s)

OCO (order-cancel-other) a type of two orders that a client can place on one investment instrument whereby when any order triggered (filled) the other order will automatically be cancelled

If-Done Order a type of order that a client can place on one investment instrument whereby when the order is triggered (filled) the other order(s) will automatically be activated

Trailing Stop Order Trailing stops are accepted by the platform. If a client has an open buy position and wants to move his stop up as the market trades higher, he can automate this process with a trailing stop

5.4. SETTLEMENT

The conclusion of the order process takes place when the transaction is settled. Until settlement, the execution is at risk. Therefore, the ability and likelihood of due settlement is a factor for Magna in achieving the best possible execution.

6. EXECUTION DECISION PROCESS

6.1. EXECUTION FACTORS

The Markets in Financial Instruments Directive (MiFID) best execution regime requires investment firms to take all reasonable steps to obtain the best possible result for their Clients considering **price**, **cost**, **speed**, **likelihood of execution and settlement**, **size**, **market impact and price risk**, **nature of the order and any other considerations relevant to the execution of the order**.

To achieve best possible result for clients on a consistent basis, Magna will weigh the relative importance and impact of **execution factors** in accordance with the client's requirements, the type of order, the financial instrument(s) involved, available trading venues and prevailing market conditions.

Unless special circumstances apply, as set forth below, Magna's priority when executing an order will be to obtain the best possible result for the client, considering all relevant execution factors. Without other instructions from the client, this typically means obtaining the best possible price for the client. When Magna decides on the best possible method for execution, the Firm considers the following steps:

6.2. NATURE OF ORDER

Considerations are given to who placed the order, the type of instrument, the cause of the order (e.g., reallocation or asset flow in client portfolios) and whether there are any instructions from order giver with respect to price limits or time of execution.

6.3. EXECUTION CLASSIFICATION

Execution classification is based on an instrument analysis considering step 1 and current market conditions. Relevant factors are:

- Size of the order;
- Market liquidity;
- Market volatility; and
- Geographic area (e.g., EU/Non-EU).

6.4. BROKER OR VENUE SELECTION

The decision to execute a given order via a broker or directly on a venue is subject to the nature of the order and the execution classification.

6.5. EXECUTION

The execution decision is subject to the outcome of the steps described in sections 6.1 - 6.4 above. The best possible execution of any particular transaction is driven by the Execution Factors listed in 6.1 above.

Magna, in its capacity as agent or matched principal, will adhere to the guidelines in the <u>FX Global</u> <u>Code</u>, including:

- communicate with the Client regarding the nature of their relationship;
- seek to obtain the result requested by the Client;
- establish a transparent order execution policy that should supply information relevant to the Client order that may include:
 - \circ $\;$ information on where the Firm may execute the Client orders;
 - \circ $\ \ \,$ the factors affecting the choice of execution venues; and
 - $\circ~$ information as to how the Firm intends to provide for the prompt, fair, and expeditious execution of the Client order;

- be transparent with the Client about the Firm's terms and conditions, which clearly set out fees and commissions applicable throughout the time of the agreement; and
- share information relating to orders accepted on an Agency Magna with any marketmaking or Principal trading desks only as required to request a competitive quote.

6.6. SPECIAL CIRCUMSTANCES

Magna may under special circumstances deviate from how we generally prioritize between Execution Factors. Special circumstances include situations where markets are exceptionally volatile or disrupted.

7. VENUE APPROVAL PROCESS

In dealing with us you typically transact directly with us and not on any other exchange or other external market or venue. Any trades with us are non-transferable. If you create an open position with us, you must close it with us.

7.1. VENUE APPROVAL PROCESS

Magna selects execution venues which enables us to deliver best execution to clients on a continuous Magna In this connection, we will also consider qualitative factors like clearing schemes, circuit breakers, liquidity analysis and any other relevant considerations.

To inform our selection process and to evaluate and compare execution venues, we may review quarterly execution quality reports published by the venues. In addition, we review our own transaction data at least quarterly.

7.2. LIST OF APPROVED EXECUTION VENUES

A list of our approved execution venues is available on Magna's website.

8. SELECTION OF BROKERS FOR TRANSMISSION OF ORDERS

As per Magna's Client Agreement, the Firm may transmit orders to brokers for execution on behalf of our clients. Magna will only transmit orders to brokers who are on our list of approved brokers.

The criteria for broker selection admitted to our approved broker list are described in the following section.

The factors determining broker selection for any order are outlined for each Financial Instrument in Appendix 1.

8.1. BROKER AND COUNTERPARY APPROVAL PROCESS

The factors relevant for selecting brokers and counterparties can be grouped into the soundness and the service level of brokers and counterparties and include the following:

Soundness of broker/counterparty

- Reputation, financial strength, and stability;
- Access to primary and/or secondary markets; and
- Ongoing reliability.

Service level of broker/counterparty

- Best Execution Policy¹;
- Overall costs of a trade including commissions, mark-ups, markdowns, or spreads;
- Market share;
- Electronic connectivity;
- Block trading and block positioning capabilities;
- Willingness to execute difficult transactions;
- Willingness and ability to locate and/or commit capital to complete trades; and
- Anonymity of trading activity.

In addition, the following conditions must be met before brokers and counterparties can be approved:

- Accurate and timely execution, settlement, clearance, and error/dispute resolution processes;
- Licensed, as required, to execute the type of transaction; and
- Supervision by national authorities.

8.2. LIST OF APPROVED BROKERS

A list of our approved brokers is available on Magna's website.

8.3. ALGORITHMIC TRADING

Magna will often make use of algorithmic trading protocols provided by the brokers with whom Magna transacts with. All algorithms used by Magna are assessed as part of the broker approval process and continuously reviewed.

¹ In instances where Magna is deemed to be an Eligible Counterparty, the Best Execution obligation will not apply.

8.4. OTC EXECUTION

Magna may execute client orders bilaterally with its counterparties outside trading venues, Over the Counter (OTC). OTC transactions may be subject to increased counterparty risk and settlement risk, as these transactions are not covered by the clearing and settlement rules of the relevant trading venue and central counterparty. Magna clients may ask Magna for additional information about the consequences of OTC trading.

When executing orders OTC, Magna will check the fairness of the price proposed to the client by analysing market data used in the estimation of the price of such product and, where possible, by comparison with relevant products.

When dealing in derivatives, the counterparty must be on Magna's approved broker list and an ISDA agreement must be in place.

8.5. TRADING OBLIGATION

In instrument classes subject to trading obligations under MiFID II, Magna will ensure orders are not executed OTC, but instead done on a trading venue in accordance with the specific requirement

9. MONITORING EXECUTION QUALITY

As part of Magna's efforts to always deliver the best possible execution for clients, Magna has implemented a range of initiatives to monitor execution quality. For all Financial Instruments, pre-trade processes in the form of internal policies have been designed and implemented. Furthermore, post-trade monitoring of execution quality is based on transaction cost analysis (TCA) and outlier reports. TCA reports are produced in-house and monitor the quality of executed transactions by comparing these against relevant benchmarks. Outlier reports compare transactions against relevant reference prices and lists trades with larger deviations as outliers.

9.1. EXECUTION PROCESS CONTROL

The Compliance Officer at Magna is overall responsible for the best execution process at Magna This includes the responsibility to continuously monitor and review execution quality and the appropriateness of existing execution procedures. The Committee is further responsible for improving execution procedures where possible.

9.2. PROHIBITED PRACTICES

With respect to the trading procedures the following prohibited practises at Magna include:

- Magna may not direct orders to brokers in return for any gifts or entertainment;
- Magna may not direct orders to brokers if any conflict of interests exists which cannot be mitigated;

and

 Magna may not receive any remuneration, discount, or non-monetary benefit for routing client orders to brokers or execution venues which would infringe the requirements on conflict of interest on inducements.

and

 Magna may not receive any remuneration, discount or non-monetary benefit for routing client orders brokers or execution venues which would infringe the requirements on conflict of interest or inducements.

10. DEMONSTRATION TO CLIENTS

Per the requirements of MiFID II, Magna will annually summarise and publish on its website disclosures for each class of financial instruments the top five venues in terms of trading volume for transmitted orders and information on the quality of execution obtained in the preceding year.

Magna clients may make a reasonable and proportionate request for information to Magna about its execution policies and instructions and how these are reviewed. Magna clients may ask Magna to demonstrate that the client order has been executed in accordance with this Policy.

11. GOVERNANCE AND REVIEW PROCESS

Magna Compliance Officer monitors the compliance and effectiveness of the execution procedures (including this Policy and the scope of the best execution obligation) and assesses on a regular basis whether the execution venues and counterparties selected by Magna provide the best possible result for client transactions subject to best execution.

12. DEFINITIONS AND GLOSSARY

	Organized Trading Facility. A multi-lateral system which is not a Regulated
	Market or an MTF and in which multiple third-party buying and selling
OTF	interests in bonds, structured finance products, emission allowances or
	derivatives are able to interact in a system in a way that results in a contract
	in accordance with Title II of MiFID II.
	A Passive Order is characterised as an order that is entered into the order
Passive and	book of a trading venue and provides liquidity, whereas an Aggressive Order
Aggressive Orders	is defined as an order that is entered into the order book of a trading venue
	and removes liquidity.
Policy	Magna's "Best Execution Policy" (this document).
Professional	A client that meets the criteria laid out in Annex II of MiFID II.
Client	Regulated Market. A multi-lateral system operated and/or managed by a
	market operation, which facilitates the bringing together of multiple third-
	party buying and selling interests in financial instruments in a way that
	results in a contract, in respect of the financial instruments admitted to
RM	trading under its rules and/or systems, and which is authorised and
	functions regularly and in accordance with the provisions of Title III of MiFID
	II.
ТСА	Transaction Cost Analysis.
	Systematic Internaliser. An investment firm which, on an organised,
SI	frequent, and systematic basis, deals on own account by executing client
	transactions outside a Regulated Market or an MTF.
	A contract, for the sale of a commodity, under the terms of which delivery is
Spot	scheduled to be made within the longer of either two trading days or the
Commodities	period generally accepted in the market for that commodity, as the
	standard delivery period.
	A purchase or sale of foreign currency, which is generally settled within two
Spot FX	business days.
<u> </u>	When Magna receives a specific instruction from a client as to how to
Specific	execute the order (or a particular aspect of the order) and we accept the
Instruction	specific instruction.
SSTI	Size Standard to Instrument.

VWAP	Volume Weighted Average Price.

13. APPENDIX

This appendix will, for each class of Financial Instrument as defined in Commission Delegated Regulation (EU) 2017/576 and offered by Magna, outline how the best possible execution is achieved on a consistent Magna

13.1. FOREIGN EXCHANGE SPOT

13.1.1) Products in scope

Foreign exchange (FX) spot is not defined as a Financial Instrument pursuant to MiFID II and thus not subject to best execution requirements. However, as part of Magna's obligation to act honestly, fairly, and in the best interest of clients, Magna below describes how trading in FX spot is undertaken.

13.1.2) How Magna applies best execution

Magna trades in competition on all RFQ trades among approved brokers. Magna may, on client's request, also trade FX spot with client-specific brokers.

13.1.3) The order handling process

Magna nets as much of all trades in the same currency cross pair as possible and trade as a RFQ on either an MTF or with an SI. To tap directly into the liquidity in primary FX markets, Magna may trade larger orders via use of algorithms. Magna will prior to using algorithms perform a pre-trade analysis on expected time of order execution, expected participation rate and expected costs of trading with an algorithm vis-à-vis trading in an RFQ.

13.1.4) Execution venues and brokers

To evaluate the quality of the selected venue, we analyse e.g., reversion numbers and market share based on quarterly venue analysis. If we deem a venue to consistently underperform, we may ask the broker to stop executing orders on the venue on our behalf. Where applicable, broker selection is subject to the client's ISDA agreements.

13.1.5) Benchmarking and monitoring

Monitoring of execution quality in algorithmic FX spot transactions is based on transaction cost analysis (TCA).

13.2. FOREIGN EXCHANGE DERIVATIVES

13.2.1) Products in scope

This section provides further details regarding the application of best execution requirements in relation to foreign exchange (FX) derivatives. This includes FX forwards, FX swaps and non-deliverable forwards (NDF).

13.2.2) How Magna applies best execution

Magna seeks execution of client orders in FX derivatives through brokers by transmitting orders to them for execution in accordance with their execution policies.

13.2.3) Prioritization of Execution Factors

For professional clients within foreign exchange derivatives, Magna will prioritize as follows: price, costs, speed, likelihood of execution and settlement, size, market impact and price risk and nature of the order or any other consideration relevant to the execution of the order.

13.2.4) The order handling process

FX forwards are traded as either RFQ or via algorithms. FX swaps and NDFs are traded in competition as RFQ. In RFQs, Magna selects the broker for execution based mainly on the Execution Factors of price and costs. Algorithmic trades are typically used for larger orders. In algorithmic trades, Magna will select the best broker for execution based on the outcome of a pre-trade analysis on expected total costs of trading and expected time of order completion.

13.2.5) Execution venues and counterparties

In FX derivatives, Magna may either transmit orders to a broker for execution or execute bilaterally. Magna may only trade with approved brokers, either client-specific or where ISDA agreements are in place. Where FX spot is traded and converted to FX forwards, Magna may decide on the optimal venue for execution. Venue selection is determined by market share of the venue, costs, and venue toxicity.

The derivatives trading obligation will, where applicable, mean that FX derivatives transactions are done over a trading venue.

Broker selection is subject to the client's ISDA agreements.

13.2.6) Benchmarking and monitoring

Monitoring of execution quality in algorithmic FX derivatives transactions is based on transaction cost analysis (TCA).

© Magna Capital Limited Capital Markets UK Ltd. |Company Number 06485053 Authorized and regulated by the Financial Conduct Authority - FRN 476555

13.3. EQUITY DERIVATIVES

13.3.1) Products in scope

This section provides further details regarding the application of best execution requirements in relation to equity derivatives. This includes only equity index futures.

13.3.2) How Magna applies best execution

Magna seeks execution of client orders in equity derivatives through brokers by transmitting orders to them for execution with the primary objective of minimizing slippage to the given reference benchmark selected by Magna

13.3.3) Prioritization of Execution Factors

For professional clients within equity derivatives, MAGNA will prioritize as follows: price, costs, speed, likelihood of execution and settlement, size, market impact and price risk and nature of the order or any other consideration relevant to the execution of the order.

13.3.4) The order handling process

In determining the best broker for execution, we consider the below factors:

- Historic performance: broker's average execution quality relative to a relevant trading benchmark;
- Accuracy and timeliness of execution & settlement: broker's ability to pass on trade information during execution as well as matching and settlement of trades in due time;
- Reputation and financial strength: how the broker is publicly perceived and the broker's credit worthiness;
- Quality of service: broker's ability and willingness to meet specific trading requirements, following up on trades and handling trades professionally. In addition to the above, we consider the below factors in high difficulty orders:
- Access to liquidity: broker's ability to source relevant liquidity and finding the other side of our trades.
- Block trading capabilities: broker's ability to facilitate blocks and provide risk capital / principal trading at a competitive price.
- Willingness to execute difficult transactions: broker's willingness to commit capital to facilitate execution on highly illiquid orders.
- Anonymity of trading: how the broker manages the block trading process while minimizing
 information leakage. If order conditions are met in high difficulty orders, traders may act on
 liquidity opportunities. These trades are typically traded within the spread at the time of
 execution. However, as the most important factor is liquidity, traders may go outside the
 spread to access liquidity.

13.3.5) Execution venues and brokers

Equity index futures are traded on the designated exchanges.

13.3.6) Benchmarking and monitoring

Monitoring of execution quality in equity derivatives is based on transaction cost analysis (TCA).

13.4. COMMODITY PRODUCTS

13.4.1) Products in scope

This section provides further details regarding the application of best execution requirements in relation to commodity derivative products. Spot commodity products do not fall within the meaning of Financial Instruments, nevertheless we are subject to obligations to treat clients fairly and to manage any conflicts that may arise relating to spot commodity product transactions.

13.4.2) How Magna applies best execution

When executing orders on behalf of clients, Magna selects Execution Venues in a manner that is consistent with our approach to taking sufficient steps to provide Best Execution, which is set out in section 6 of this Policy. Specific factors that we consider when selecting an Execution Venue depend on the Asset Class of the Financial Instrument and the nature of the service in question.

13.4.3) Prioritization of Execution Factors

For professional clients within commodity products, Magna will prioritize as follows: price, likelihood of execution and the remaining factors are generally given equal ranking.

13.4.4) The order handling process

Orders are transmitted for execution to our execution broker, which will work the order in the market.

13.4.5) Execution venues and brokers

Magna may either transmit orders to a broker for execution or execute bilaterally. Magna may only trade with approved brokers, either client-specific or where ISDA agreements are in place. Where spot commodities are traded and converted to forward contracts, Magna may decide on the optimal venue for execution. Venue selection is determined by market share of the venue, costs, and venue toxicity.

The derivatives trading obligation will, where applicable, mean that commodity derivatives transactions are done over a trading venue.

Broker selection is subject to the client's ISDA agreements.

13.4.6) Benchmarking and monitoring

Monitoring of execution quality in commodities is based on transaction cost analysis (TCA).

13.5. ENERGY

13.5.1) Products in scope

This section provides further details regarding the application of best execution requirements in relation to energy products. Spot energy products do not fall within the meaning of Financial Instruments, nevertheless we are subject to obligations to treat clients fairly and to manage any conflicts that may arise relating to spot commodity product transactions.

13.5.2) How Magna applies best execution

When executing orders on behalf of clients, Magna selects Execution Venues in a manner that is consistent with our approach to taking sufficient steps to provide Best Execution, which is set out in section 6 of this Policy. Specific factors that we consider when selecting an Execution Venue depend on the Asset Class of the Financial Instrument and the nature of the service in question.

13.5.3) Prioritization of Execution Factors

For professional clients within exchange traded products, Magna will prioritize as follows: price, costs, speed, likelihood of execution and settlement, size, market impact and price risk and nature of the order or any other consideration relevant to the execution of the order.

13.5.4) The order handling process

Orders in exchange traded products are either executed directly by Magna through a request-forquote (RFQ) process via a trading platform or transmitted to a broker, which will work the order in the market.

13.5.5) Execution venues and brokers

The nature of the order is important in determining how to optimally execute the order. There are two overall order types: Orders arising from investment decisions and flow driven orders.

13.5.6) Benchmarking and monitoring

Monitoring of execution quality in exchange traded products is based on transaction cost analysis (TCA).

13.6. CONTRACTS FOR DIFFERENCE (CFD)

13.6.1) Products in scope

This section provides further details regarding the application of best execution requirements in relation to CFDs.

13.6.2) How Magna applies best execution

Magna seeks execution of client orders in CFDs through a broker by transmitting orders to the broker for execution in accordance with the broker's execution policy.

13.6.3) Prioritization of Execution Factors

In CFD trades, Magna does not prioritize between Execution Factors due to the nature of all trades being executed between Magna clients and the selected prime brokers for CFDs.

13.6.4) The order handling process

Orders are transmitted for execution to our prime broker.

13.6.5) Execution venues and brokers

When we transmit orders for execution, the broker selects the venue on our behalf. To evaluate the quality of the selected venue, we analyse e.g., reversion numbers and market share based on quarterly venue analysis. If we deem a venue to consistently underperform, we may ask the broker to stop executing orders on the venue on our behalf.

13.6.6) Benchmarking and monitoring

Monitoring of execution quality in CFDs is based on transaction cost analysis (TCA) and daily outlier reports.

13.7. EXCHANGE TRADED PRODUCTS

13.7.1) Products in scope

This section provides further details regarding the application of best execution requirements in relation to exchange traded products. This includes exchange traded funds and exchange traded notes.

13.7.2) How Magna applies best execution

Orders are either executed directly by Magna through a RFQ process via a trading platform or transmitted to brokers who will execute in accordance with their execution policies. Magna trades in competition on all RFQ trades among approved brokers.

13.7.3) Prioritization of Execution Factors

For professional clients within exchange traded products, Magna will prioritize as follows: price, costs, speed, likelihood of execution and settlement, size, market impact and price risk and nature of the order or any other consideration relevant to the execution of the order.

13.7.4) The order handling process

Orders in exchange traded products are either executed directly by Magna through a request-forquote (RFQ) process via a trading platform or transmitted to a broker, which will work the order in the market.

13.7.5) Execution venues and brokers

The nature of the order is important in determining how to optimally execute the order. There are two overall order types: Orders arising from investment decisions and flow driven orders.

13.7.6) Orders arising from investment decisions

Orders arising from investment decisions results in reallocation of existing holdings or addition of new holdings. These orders are typically linked and conditional in terms of market exposure, cash restrictions or time zones. These orders are generally traded with the primary objective of minimizing slippage to the given reference benchmark selected by Magna In this regard, the trading team may react on liquidity opportunities.

13.7.7) Flow driven orders

Flow driven orders are the result of flows in client portfolios. These orders are typically traded as close as possible to the NAV time-strike, making the Execution Factors of speed and likelihood of execution of higher relative importance.

13.7.8) Benchmarking and monitoring

Monitoring of execution quality in exchange traded products is based on transaction cost analysis (TCA).
